

CategoryAxis.MajorUnit

Description

In conjunction with [MajorUnitValue](#), determines the [time interval](#) between axis labels and major tick marks for category axes with a [DisplayType](#) of [TimeScale](#).

C#

```
public AxisTimeUnit MajorUnit{ get; set; }
```

vb.net

```
Public Property MajorUnit() As AxisTimeUnit
```

Remarks

This value specifies the units of measurement when determining how frequently there will be data labels on a time-scaled category axis. For example, if [MajorUnit](#) is set to [Month](#) and [MajorUnitValue](#) is set to 6, then there will be 6 months between every label.

The default value for newly created charts in ExcelWriter is [Days](#).

This property has no effect for category axes with a [DisplayType](#) of [Category](#).
