

Worksheets.MoveSheet(Worksheet, Int32)

Description

Moves a worksheet to a different position in the workbook.

C#

```
public void MoveSheet(Worksheet sheet, int position)
```

vb.net

```
Public Sub MoveSheet(ByVal sheet As Worksheet, ByVal position As Integer)
```

Parameters

sheet

A [Worksheet](#) object representing the sheet to move.

position

The 0-based position to which to move the specified worksheet. If *position* is less than 0, the sheet will be the first sheet in the workbook. If *position* is equal to or greater than [Worksheets.Count](#), it will be inserted after the last worksheet.

Examples

C#

```
sheets.MoveSheet(oWorkSheet, 3);
```

vb.net

```
sheets.MoveSheet(oWorkSheet, 3)
```
