

Worksheets.CreateChartsheet(ChartType, String, Int32)

Description

Creates a new Chartsheet at a specified position in the workbook.

C#

```
public Chartsheet CreateChartsheet(ChartType type, System.String name, int position)
```

vb.net

```
Public Function CreateChartsheet(ByVal type As ChartType, ByVal name As String, ByVal position As Integer) As Chartsheet
```

Parameters

type

The type of chart to create. Specify both a chart type and sub-type, for example, [ChartType.Bar.Clustered](#).

name

Name for the new chartsheet.

position

The 0-based position at which to insert the chartsheet. If `position` is greater than [Worksheets.Count](#), an exception will be thrown.

Returns

A [Chartsheet](#) object representing the chartsheet created.

Examples

C#

```
ChartSheet cs =  
    sheets.CreateWorksheet(ChartType.Bar.Clustered, "NewSheet", 0);
```

vb.net

```
Dim cs As ChartSheet = _  
    sheets.CreateWorksheet(ChartType.Bar.Clustered, "NewSheet", 0)
```
