

ErrorBar.ErrorValueType

Description

The [ErrorValueType](#) is used in the [ErrorBar.ValueType](#) property to specify how the error value is determined.

C#

```
public sealed class ErrorValueType : TypesafeEnum
```

vb.net

```
Public NotInheritable Class ErrorValueType  
    Inherits TypesafeEnum
```

Values

Name	Description
Custom	The error varies between data points, and is determined by the ErrorBar.CustomMinusFormula and ErrorBar.CustomPlusFormula properties.
FixedValue	The error value specified by ErrorBar.Value is a fixed value.
Percentage	The error value specified by ErrorBar.Value is a percentage.
StandardDeviation	The error value specified by ErrorBar.Value is a standard deviation.
StandardError	The error is calculated as the standard error of the data point's value
