

ErrorBar.TShaped

Description

Sets or returns whether the error bars will be T shaped.

C#

```
public boolean TShaped{ get; set; }
```

vb.net

```
Public Property TShaped() As Boolean
```

Remarks

If the error bar is not T shaped, it will consist of a single line going from the negative error value to the positive error value. If the error bar is T shaped, there will be an additional line perpendicular to this line at each end of the error bar. All parts of the line, including the T, are formatting according to the [ErrorBar.Line](#) property.

If you create a new error bar with ExcelWriter, it will be T shaped by default.
