

# Worksheet.Item(String)

## Description

Returns the cell at the specified Excel-style reference. This property is an indexer for the [Worksheet](#) class.

**C#**

```
public Cell this[string reference] { get; }
```

**vb.net**

```
Public Default ReadOnly Property Item(ByVal reference As String) As Cell
```

## Parameters

### *rowNumber*

The Excel-style reference of the cell to retrieve.

### *columnNumber*

The Excel-style reference of the cell to retrieve.

## Returns

A [Cell](#) object representing the cell at the specified Excel-style reference.

## Examples

**C#**

```
//--- Get Cell by Excel-style reference  
Cell cellA1 = ws["A1"];
```

**vb.net**

```
'--- Get Cell by Excel-style reference  
Dim cellA1 As Cell = ws("A1")
```
