

CategoryAxis.AxisDisplayType

Description

Enumeration value allowing you to determine how the axis is displayed.

C#

```
public sealed class AxisDisplayType : TypesafeEnum
```

vb.net

```
Public NotInheritable Class AxisDisplayType  
    Inherits TypesafeEnum
```

Remarks

This enumeration is used in the [CategoryAxis.DisplayType](#) property to determine how the category axis should be displayed. For more information on the effect that the different enumeration values have, see the remarks on that property.

Values

Name	Description
Automatic	Excel will set the display format automatically.
Category	Category axis values will be displayed as text, with each data point occupying an equal amount of horizontal space.
TimeScale	Category axis will show a range of dates in chronological order. The horizontal position of each data point is determined by where it falls in this range of dates.
