

NamedObject.NamedObjectType

Description

Returns the type of object that the [NamedObject](#) refers to.

C#

```
public ReturnType NamedObjectType{ get; }
```

vb.net

```
Public ReadOnly Property NamedObjectType() As ReturnType
```

Examples

C#

```
NamedObject.ReturnType type = namedObj.NameType;
```

vb.net

```
Dim type As NamedObject.ReturnType = namedObj.NameType
```
