

Chart.ObjectPositioning

Description

Sets or returns the [ObjectPositioning](#) value that determines the chart's resize and reposition behavior when the cells in the worksheet are changed.

C#

```
public ObjectPositioning ObjectPositioning{ get; set; }
```

vb.net

```
Public Property ObjectPositioning() As ObjectPositioning
```

Remarks

If the chart is a [Chartsheet.Chart](#), object positioning will return [ObjectPositioning.NoMoveAndNoResize](#)
