

# Cells.Item(String)

## Description

Represents a single cell in a [Cells](#) collection. [Item](#) is the indexer of the `Cells` collection, so `Cells["A1"]` is equivalent to `Cells.Item["A1"]`.

**C#**

```
public Cell this[System.String name] { get; }
```

**vb.net**

```
Public Default ReadOnly Property Item(ByVal name As String) As Cell
```

## Parameters

*index*

The index of the cell as a string

## Returns

A [Cell](#) object representing the cell at the specified position.

## Examples

**C#**

```
Cell cellA1 = cls["A1"];
```

**vb.net**

```
Dim cellA1 As Cell = cls("A1")
```
