Series.Name

Description

Sets or returns the name of the series. See also Series.NameFormula.

> **C#**
>
> ```
> public System.String Name{ get; set; }
> ```

> **vb.net**
>
> ```
> Public Property Name() As String
> ```

Remarks

If neither a Name nor a NameFormula are set, a default series name will be used in the worksheet. The default name is the series number.

Setting this property will clear the Series.NameFormula property. If you set both a Name and a NameFormula, the one that is set last will take effect.
