

NamedStyle.Font

Description

Returns a [Font](#) object that is a copy of this style's font. Some style types do not have character formatting. In these cases, this method returns null.

C#

```
public Font Font{ get; }
```

vb.net

```
Public ReadOnly Property Font() As Font
```

Examples

C#

```
Font fnt = namedStyl.Font;
```

vb.net

```
Dim fnt As Font = namedStyl.Font
```
