Shape.Width

Description

Sets or returns the width of the Shape.

C#
```
public double Width{ get; set; }
```

vb.net
```
Public Property Width() As Double
```

Remarks

If the `Shape` is directly within a Worksheet, the width is in points (1/72 inch). If the `Shape` is within Chartsheet, the width is a percentage of the chart's width (0-100).

If you set a shape's width (or Shape.Height) to a value read from a spreadsheet, the shape may lose precision due to the way Excel stores shape dimensions.
