

Chart.ScatterValueAxis

Description

Returns a [ValueAxis](#) object representing the chart's scatter values on the X axis.

C#

```
public ValueAxis ScatterValueAxis{ get; }
```

vb.net

```
Public ReadOnly Property ScatterValueAxis() As ValueAxis
```

Remarks

The scatter value axis is a horizontal axis, and should only be used when there are scatter series, *and only scatter series* on the primary axis. When there are a mix of scatter and non-scatter series on the primary axis, the [CategoryAxis](#) should be used instead.
