

# Table.SetRowHeight(Int32, Int32)

## Description

Sets an `int` representing the height of a particular row in the table. A row height is set in twips. One twip = (1/20 pt) or (1/1440 in).

**C#**

```
public void SetRowHeight(int row, int height)
```

**vb.net**

```
Public Sub SetRowHeight(ByVal row As Integer, ByVal height As Integer)
```

## Parameters

***row***

An `int` representing the row index to set the height for.

***height***

An `int` representing the new height in twips of the specified row. One twip = (1/20 pt) or (1/1440 in).

## Remarks

MS Word equivalent: Table menu > Table properties... > Row tab > Size section > Row #: > Specify height:

## Examples

**C#**

```
//--- Set the height of the 3rd row to 1 inch  
oTable.SetRowHeight(2, 1440);
```

**vb.net**

```
'--- Set the height of the 3rd row to 1 inch  
oTable.SetRowHeight(2, 1440)
```
