

DataImportProperties.UseColumnNames

Description

Sets or returns whether to import column names to the first row (or first column if [Transpose](#) is set to `true`) of the imported data's target cells.

C#

```
<p> public boolean UseColumnNames{ get; set; }</p>
```

vb.net

```
<p>Public Property UseColumnNames() As Boolean</p>
```

Examples

C#

```
//--- Get UseColumnNames
    bool importColNames = importProps.UseColumnNames

    //--- Set UseColumnNames
    importProps.UseColumnNames = true;
```

vb.net

```
'--- Get UseColumnNames
    Dim importColNames As Boolean = oDataImportProperties.UseColumnNames

    '--- Set UseColumnNames
    importProps.UseColumnNames = True
```
