

NamedStyle.ParagraphFormatting

Description

Returns a [ParagraphFormatting](#) object that is a copy of this style's paragraph formatting. Some style types do not have paragraph formatting. In these cases, this method returns null.

C#

```
public ParagraphFormatting ParagraphFormatting{ get; }
```

vb.net

```
Public ReadOnly Property ParagraphFormatting() As ParagraphFormatting
```

Examples

C#

```
ParagraphFormatting pFormatting = namedStyl.ParagraphFormatting;
```

vb.net

```
Dim pFormatting As ParagraphFormatting = namedStyl.ParagraphFormatting
```
