

NamedObject.Formula

Description

If the [NamedObject](#) refers to a named range, [Formula](#) returns the formula associated with the range, e.g. "=Sheet1!A1:G10".

C#

```
public System.String Formula{ get; }
```

vb.net

```
Public ReadOnly Property Formula() As String
```

Examples

C#

```
String rangeFormula = namedObj.Formula;
```

vb.net

```
Dim rangeFormula As String = namedObj.Formula
```
