

Trendline.UseIntercept

Description

Specifies whether the intercept value will be used by the trendline.

C#

```
public boolean UseIntercept{ get; }
```

vb.net

```
Public ReadOnly Property UseIntercept() As Boolean
```

Remarks

This method only returns whether or not the trendline will use a pre-defined intercept value. To get or set the value of the intercept, use [Trendline.Intercept](#). Setting the value of the intercept will set this property to true. Clearing the value of the intercept with [Trendline.ClearIntercept\(\)](#) will set this property to false.
