

NamedStyle.StyleType

Description

Returns a [NamedStyle.Type](#) object that represents the type of this style. Word 2003 supports four style types: Character, Paragraph, Table, and List. Older versions support fewer than this.

C#

```
public Type StyleType{ get; }
```

vb.net

```
Public ReadOnly Property StyleType() As Type
```

Examples

C#

```
NamedStyle.Type nsType = namedStyl.Type;
```

vb.net

```
Dim nsType As NamedStyle.Type = namedStyl.Type
```
