

Style.NumberFormat

Description

Sets or returns the number format string used for formatting of numbers and dates.

C#

```
public System.String NumberFormat{ get; set; }
```

vb.net

```
Public Property NumberFormat() As String
```

Examples

C#

```
//--- Get NumberFormat
string numFormat = style.NumberFormat;

//--- Set NumberFormat
style.NumberFormat = "#.##";

//--- Set NumberFormat
style.NumberFormat = "mm/dd/yyyy hh:mm:ss AM/PM";
```

vb.net

```
'--- Get NumberFormat
Dim numFormat As String = style.NumberFormat

'--- Set NumberFormat
style.NumberFormat = "#.##"

'--- Set NumberFormat
style.NumberFormat = "mm/dd/yyyy hh:mm:ss AM/PM"
```
