

Shape.Width

Description

Sets or returns the width of the [Shape](#).

C#

```
public double Width{ get; set; }
```

vb.net

```
Public Property Width() As Double
```

Remarks

If the Shape is directly within a [Worksheet](#), the width is in points (1/72 inch). If the Shape is within [Chartsheet](#), the width is a percentage of the chart's width (0-100).

If you set a shape's width (or [Shape.Height](#)) to a value read from a spreadsheet, the shape may lose precision due to the way Excel stores shape dimensions.
