

DataImportProperties.MaxRows

Description

Returns or set an `int` that represents the maximum number of rows to be imported. If more rows than this are in the data source, the extra ones will be ignored.

C#

```
public int MaxRows{ get; set; }
```

vb.net

```
Public Property MaxRows() As Integer
```

Examples

C#

```
//--- Return MaxRows
    int rows = importProps.MaxRows;

    //--- Set MaxRows
    importProps.MaxRows = 50;
```

vb.net

```
'--- Return MaxRows
    Dim rows As Integer = importProps.MaxRows

    '--- Set MaxRows
    importProps.MaxRows = 50
```
