

PowerPointApplication.Save(PowerPointWriter.Presentation, String)

Description

Saves a specified [Presentation](#) as a OOXML format.pptx.

C#

```
public virtual void Save(Presentation presentation, System.String fileName)
```

vb.net

```
Public Overridable Sub Save(ByVal presentation As Presentation, ByVal fileName As String)
```

Parameters

presentation

A [Presentation](#) object representing the presentation to save.

fileName

Specifies a complete path and file name for the [Presentation](#). [PowerPointWriter](#) will save the file to this location. If a file with the same name exists, it will be overwritten by the new [PowerPoint](#) file.

Examples

C#

```
PowerPointApplication pptApp = new PowerPointApplication();  
Presentation pres = pptApp.Create(PwoerPointApplication.FileFormat.Pptx);  
pptApp.Save(pres, @"C:\Sales2003\June.pptx");
```

vb.net

```
Dim pptApp As New PowerPointApplication()  
Dim pres As Presentation = pptApp.Create(PowerPointApplication.FileFormat.Pptx)  
pptApp.Save(pres, "C:\Sales2003\June.pptx")
```
