

Position.InsertSection()

Description

Creates and returns an empty [Section](#) at the point represented by this Position. If this Position is in the middle of a section then the containing section will be split.

C#

```
public Section InsertSection()
```

vb.net

```
Public Function InsertSection() As Section
```

Returns

A newly created Section.

Examples

C#

```
Section sect = pos.InsertSection();
```

vb.net

```
Dim sect As Section = pos.InsertSection()
```
