Element.InsertTextBefore(String, Boolean)

Description

Creates and returns a CharacterRun at the beginning of this Element. The text to be inserted is specified as well as whether this should be a new character run or part of the existing one.

vb.net	

Parameters

text

A String representing the text to insert.

newRun

A boolean representing if this should have default formatting and become its own character run (true) or if it should assume the formatting of the first character in this Element, becoming a part of that first character run.

Returns

The CharacterRun containing the inserted text.

Examples

```
C#
CharacterRun charRun = e.InsertTextBefore("Here is some text.", true);
vb.net
```

Dim charRun As CharacterRun = e.InsertTextBefore("Here is some text.", True)
