

ParagraphFormatting.LineSpacingRule

Description

Returns a [ParagraphFormatting.LineSpacingRule](#) object that represents the type of line spacing for a paragraph. There are 3 types: AtLeast, Exactly, and Multiple. AtLeast and Exactly use twips to specify a minimum height and exact height respectively. One twip = (1/20 pt) or (1/1440 in). Multiple specifies a spacing as a number of lines. Multiple is the most common type of spacing.

C#

```
public SpacingRule LineSpacingRule{ get; }
```

vb.net

```
Public ReadOnly Property LineSpacingRule() As SpacingRule
```

Remarks

MS Word equivalent: Format menu > ParagraphFormatting... > Indents and Spacing > Spacing section > Line spacing:
