

Document.CreateParagraphFormatting()

Description

Returns a [ParagraphFormatting](#) object based on the paragraph formatting used by the BodyText style. You can then change the properties of this font and use it elsewhere.

C#

```
public ParagraphFormatting CreateParagraphFormatting()
```

vb.net

```
Public Function CreateParagraphFormatting() As ParagraphFormatting
```

Returns

A ParagraphFormatting object based on the paragraph formatting used by the BodyText style.

Examples

C#

```
ParagraphFormatting oParagraphFormatting = oDocument.CreateParagraphFormatting();
```

vb.net

```
Dim oParagraphFormatting As ParagraphFormatting =  
oDocument.CreateParagraphFormatting()
```
