

Shape.Height

Description

Sets or returns the height of the [Shape](#).

C#

```
public double Height{ get; set; }
```

vb.net

```
Public Property Height() As Double
```

Remarks

If the [Shape](#) is directly within a [Worksheet](#), the height is in points (1/72 inch). If the [Shape](#) is within [Chartsheet](#), the height is a percentage of the chart's height (0-100).

If you set a shape's height (or [Shape.Width](#)) to a value read from a spreadsheet, the shape may lose precision due to the way Excel stores shape dimensions.
