

Worksheet.GetRowProperties(Int32)

Description

Returns a [RowProperties](#) object representing the row specified by index.

C#

```
public RowProperties GetRowProperties(int rowIndex)
```

vb.net

```
Public Function GetRowProperties(ByVal rowIndex As Integer) As RowProperties
```

Parameters

rowIndex

The 0-based index of the row.

Returns

A [RowProperties](#) object representing the specified row.

Examples

C#

```
RowProperties rowProps = ws.GetRowProperties(0);
```

vb.net

```
Dim rowProps As RowProperties = ws.GetRowProperties(0)
```
