

Pictures.CreatePicture(String, Anchor)

Description

Creates a new [Picture](#) object from an existing image.

C#

```
public Picture CreatePicture(System.String pictureFile, Anchor position)
```

vb.net

```
Public Function CreatePicture(ByVal pictureFile As String, ByVal position As Anchor)  
As Picture
```

Parameters

pictureFile

The file to create the picture from. This file should be in JPEG, PNG, BMP, or GIF format and accessible in the context ExcelWriter is running in.

position

The position to place the upper-left corner of the new picture.

Returns

A Picture object.
