

# Trendline.Intercept

## Description

For all trendline types except moving average, sets or returns the point on the value axis where the trendline should intercept.

### C#

```
public double Intercept{ get; set; }
```

### vb.net

```
Public Property Intercept() As Double
```

## Remarks

If an intercept is not being used, this property will return [Double.NaN](#). After setting this value, [Trendline.UseIntercept](#) will return true. To stop using an intercept value, use [Trendline.ClearIntercept\(\)](#).
