DocumentProperties.Manager

Description

Sets or returns a `String` that represents the name of the manager in charge of this file.

C#

```
public System.String Manager{ get; set; }
```

vb.net

```
Public Property Manager() As String
```

Remarks

MS Word equivalent: File menu > Properties > Summary tab > Manager:

Examples

C#

```
//--- Return Manager
        string manager = docProps.Manager;

        //--- Set Manager
        docProps.Manager = "John Doe";
```

vb.net

```
'--- Return Manager
        Dim manager As String = docProps.Manager

        '--- Set Manager
        docProps.Manager = "John Doe"
```
