# Shape.Width

## Description

Sets or returns the width of the Shape.

### C#

```
public double Width{ get; set; }
```

#### vb.net

```
Public Property Width() As Double
```

## Remarks

If the Shape is directly within a Worksheet, the width is in points (1/72 inch). If the Shape is within Chartsheet, the width is a percentage of the chart's width (0-100).

If you set a shape's width (or Shape.Height) to a value read from a spreadsheet, the shape may lose precision due to the way Excel stores shape dimensions.
