

# PivotTableLayout

Introduced in build 9.1

## Description

The PivotTableLayout class contains the set of properties specific to the layout of pivot tables. To get a PivotTableLayout object, use [PivotTable.PivotTableLayout](#).

**C#**

```
public sealed class PivotTableLayout
```

**vb.net**

```
Public NotInheritable Class PivotTableLayout
```

## Properties

| Name                                          | Description                                                            |
|-----------------------------------------------|------------------------------------------------------------------------|
| <a href="#">PivotTableLayout.ReportLayout</a> | Sets or returns the <a href="#">layout option</a> for the pivot table. |

## Nested Classes

| Name                                           | Description                                                                                        |
|------------------------------------------------|----------------------------------------------------------------------------------------------------|
| <a href="#">PivotTableLayout.LayoutOptions</a> | The LayoutOptions are used to specify the value of <a href="#">PivotTableLayout.ReportLayout</a> . |
