

# DocumentProperties.Item(String)

## Description

Returns the value of a specified property. The value can be one of the following types, depending on the property: String, Double, Integer, Boolean or DateTime.

### C#

```
public System.Object this[System.String propertyName] { get; set; }
```

### vb.net

```
Public Default Property Item(ByVal propertyName As String) As Object
```

## Parameters

### *property*

The built-in property.

## Returns

The value of the built-in property.

## Examples

### C#

```
//--- Get Property
Object application = docProps["Application"];

//--- Set Property
docProps["Application"] = "xlw";
```

**vb.net**

```
'--- Get Property  
Dim application As Object = docProps("Application")  
  
'--- Set Property  
docProps("Application") = "xlw"
```
