

# Worksheet.ImportData(System.Data.DataTable, Cell, DataImportProperties)

## Description

Imports data from an ADO.NET [DataTable](#) to cells in the worksheet. The new data will overwrite values and formulas in the target worksheet cells, but existing formatting will be preserved.

### C#

```
public Area ImportData(System.Data.DataTable data, Cell cell, DataImportProperties props)
```

### vb.net

```
Public Function ImportData(ByVal data As System.Data.DataTable, ByVal cell As Cell, ByVal props As DataImportProperties) As Area
```

## Parameters

### *data*

The [DataTable](#) to import.

### *startCell*

The cell at which to start entering the imported values.

### *props*

A [DataImportProperties](#) object that contains a set of properties that will determine the behavior of the data import.

## Returns

An [Area](#) object representing the set of cells populated with the imported values.

## Examples

### C#

```
Area importedArea = ws.ImportData(dataDT, cel, importProps);
```

**vb.net**

```
Dim importedArea As Area = ws.ImportData(dataDT, cel, importProps)
```
