Shapes.CreateShape(ShapeType, Anchor)

Description

Creates a Shape with the specified position and shape type. The specified shape type must not be Picture, Group, Comment, or Unknown. The new shape is automatically added to the Shapes collection.

> **C#**
>
> ```csharp
> public Shape CreateShape(ShapeType type, Anchor aPosition)
> ```

> **vb.net**
>
> ```vbnet
> Public Function CreateShape(ByVal type As ShapeType, ByVal aPosition As Anchor) As Shape
> ```

Parameters

type

A ShapeType value representing the type of shape to create.

aPosition

An Anchor object representing the position of the new shape in the worksheet.

Returns

A Shape object representing the new shape.
