

Document.CreateFont()

Description

Returns a [Font](#) object based on the font used by the Normal Style. You can then change the properties of this font and use it elsewhere.

C#

```
public Font CreateFont()
```

vb.net

```
Public Function CreateFont() As Font
```

Returns

A [Font](#) object based on the font used by the Normal Style.

Examples

C#

```
Font oFont = oDocument.CreateFont();
```

vb.net

```
Dim oFont As Font = oDocument.CreateFont()
```
