

Font.TextColor

Description

Sets or returns the color of the text in a character run as a [Color](#) object.

C#

```
public System.Drawing.Color TextColor{ get; set; }
```

vb.net

```
Public Property TextColor() As System.Drawing.Color
```

Remarks

MS Word equivalent: Format menu > Font... > Font tab > Font color:

Examples

C#

```
//--- Return TextColor  
Color oColor = oFont.TextColor;  
  
//--- Set TextColor  
oFont.TextColor = Color.Red;
```

vb.net

```
'--- Return TextColor  
Dim oColor As Color = oFont.TextColor  
  
'--- Set TextColor  
oFont.TextColor = Color.Red
```
