

WordTemplate.UpdateIfFields

Description

Gets or sets whether IF fields should be evaluated server-side in the WordTemplate.

C#

```
public boolean UpdateIfFields{ get; set; }
```

vb.net

```
Public Property UpdateIfFields() As Boolean
```

Remarks

If set to true, all IF fields on the template will be evaluated on the server side by the [WordTemplate](#) object. If set to false, the IF fields will not be evaluated without user action.

Examples

C#

```
WordTemplate WordTempl = new WordTemplate();  
    WordTempl.UpdateIfFields = true;
```

vb.net

```
Dim WordTempl As New WordTemplate()  
    WordTempl.UpdateIfFields = True
```
