

Workbook.SavePdf(Boolean, System.IO.Stream)

Introduced in build 10.0

Description

Saves a [Workbook](#) as a PDF document to the specified stream.

C#

```
public static void SavePdf(Boolean onlySelectedWorksheets, System.IO.Stream stream)
```

vb.net

```
Public Static Sub SavePdf(ByVal onlySelectedWorksheets As Boolean, ByVal stream As System.IO.stream)
```

Parameters

onlySelectedWorksheets

If true, only selected worksheets will be saved to the PDF. If false, all visible worksheets in the workbook will be saved to the PDF.

stream

The output stream to write to. This stream must be open and writable. ExcelWriter will not close this stream; the calling program is responsible for closing the stream and releasing the resource.

Exceptions

System.Exception

If there is a problem creating, opening, or writing to the stream specified, or reading from the Workbook object.

Remarks

The [Worksheet.PageSetup](#) property will be used to specify how each worksheet should be rendered to the PDF document. The individual PageSetup options are reflected in the final document. Each worksheet uses its own PageSetup property to determine how that worksheet should be rendered.

Examples

C#

```
ExcelApplication xla = new ExcelApplication();  
    Workbook WB= xla.Create(FileFormat.Xlsx);  
    FileStream fstream = new FileStream(@"C:\temp\outfile.pdf",  
    FileMode.Create);  
    WB.SavePdf(false, fstream);
```

vb.net

```
Dim oExcelApp As New ExcelApplication()  
    Dim wb As Workbook = oExcelApp.Create(FileFormat.Xlsx)  
    Dim fstream As New FileStream("C:\temp\outfile.pdf", FileMode.Create)  
    wb.SavePdf(False, fstream)
```
