

Designer .NET Excel - Save to Disk

The **Save to Disk** dialog opens when you select *OfficeWriter Designer .NET > Save > Save to Disk*. It allows you to save your current RDL to disk and sets the format of the report when it is exported.

To save a copy of your report locally:

1. Click **Save** on the OfficeWriter Designer .NET toolbar.
2. Select **Save to disk**.
3. Browse to the destination folder.
4. In the **file name** field, enter a name for your report.
5. From the drop-down menu, select .xls, .xlsx, or .xslm. This will be the file format that is exported from Reporting Services when running the report.

Just like in Excel, if your report contains Excel macros but you opt to save as .xlsx, which does not support VBA/macros, you will be asked if you want to cancel or continue saving without the macros.

6. Click **OK**. If a report with the same name was already saved to the specified location, you will be asked to overwrite it.
