Installing for SSRS 2016

Introduction

The OfficeWriter SQL Server Reporting Services integration has two parts:

- The server-side OfficeWriter renderer (export)
- A client-side Office add-in for designing reports - the original OfficeWriter Designer or the OfficeWriter Designer .NET.

The server-side OfficeWriter is installed with one of the main OfficeWriter installers (32 or 64 bit). The OfficeWriter Designer and the OfficeWriter Designer .NET have separate installers that can be distributed to end-users.

> ⚠ The OfficeWriter Designer .NET was made available starting in OfficeWriter 8.6. It currently supports 32-bit or 64-bit Excel 2007 and later. To determine which Designer is right for you, refer to OfficeWriter Designer vs OfficeWriter Designer .NET

Installation Instructions

> ⓘ There were some significant infrastructure changes made for SSRS 2012 in SharePoint integration mode that require a different installation process from native mode. This installation process remains unchanged for SSRS 2016.

Server-side OfficeWriter for SSRS 2016 in Native Mode

Perform a custom setup with the OfficeWriter installer to install OfficeWriter for SSRS automatically, or run through the steps to install manually.

Installing for SSRS 2012 or later with SharePoint Integration

If you are running SSRS 2016 in SharePoint integrated mode against SharePoint 2010 or 2013, there are a separate set of instructions for manual installation.

Original OfficeWriter Designer

Install the original OfficeWriter Designer using the OfficeWriter Designer installer or follow the steps to install the Designer manually. Includes instructions for manually changing the registry keys for the Designer.

OfficeWriter Designer .NET

Install the new OfficeWriter Designer .NET using the OfficeWriter Designer .NET installer.
