

ListLevel.NumberFormat

Description

Sets or returns a [WordNumberFormat](#) object that represents the format for list numbers for this list level.

C#

```
public WordNumberFormat NumberFormat{ get; set; }
```

vb.net

```
Public Property NumberFormat() As WordNumberFormat
```

Examples

C#

```
//--- Return NumberFormat
    WordNumberFormat numberFormat = level.NumberFormat;

//--- Set NumberFormat
    level.NumberFormat = WordNumberFormat.Ordinal;
```

vb.net

```
'--- Return NumberFormat
    Dim numberFormat As WordNumberFormat = level.NumberFormat

'--- Set NumberFormat
    level.NumberFormat = WordNumberFormat.Ordinal
```
